

# AR Automation: How to build cash flow resilience

AMERICAN EXPRESS PYMNTS INTELLIGENCE

## B2B Digital Payments Tracker

*"In the current environment, AR automation is no longer optional"*

**68%**

of CEOs surveyed who say payment-related delays were an issue in the last six months

**77%**

AR teams behind schedule on collections

**81%**

Companies seeing delayed payments continue to rise

# What Do You Really Want to **Achieve?**

Real Results and Real ROI

## Optimize Working Capital

Achieve significant cost savings and release cash

## Engage Your People

Free your people to focus on value-added activities and business partnering, rather than chasing customers down for a remittance

## Control Your Process

Create a fully transparent, auditable, scalable and SOX-compliant process that significantly reduces the risk of human error

## Improve Customer Experience

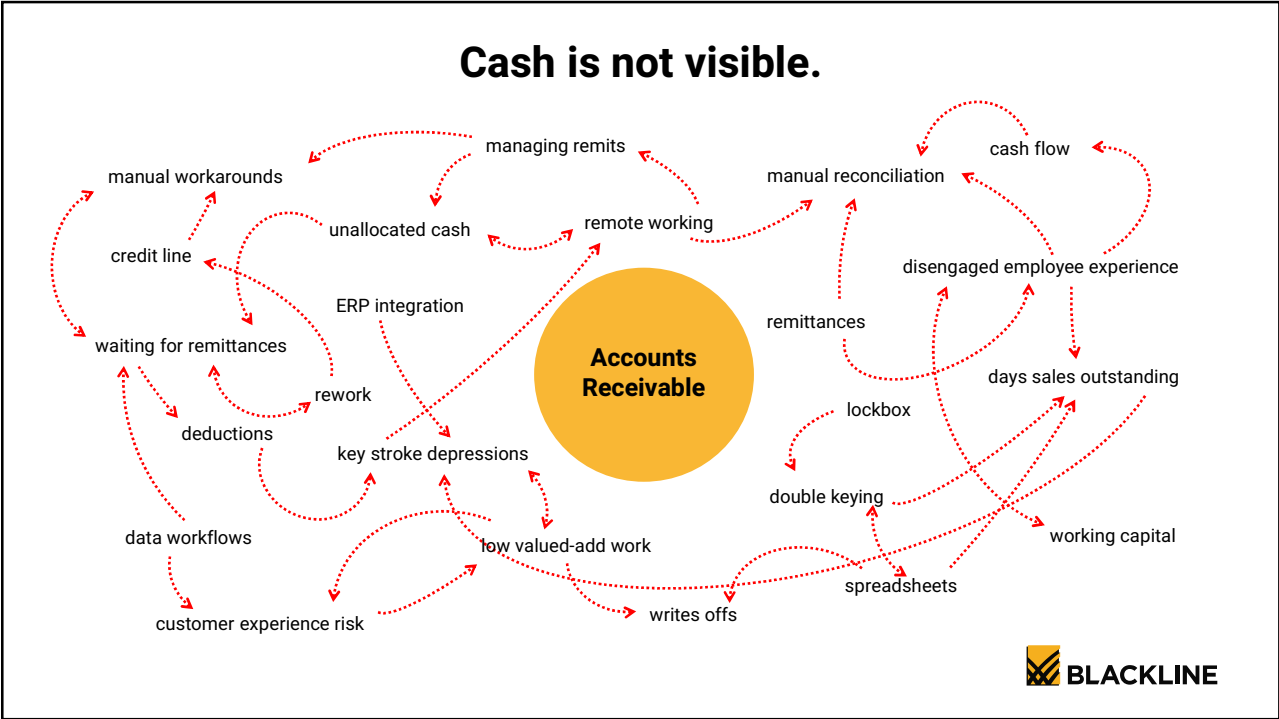

Boost customer loyalty by reconciling customer credit accounts in minutes, not days, so customer credit lines are fully available

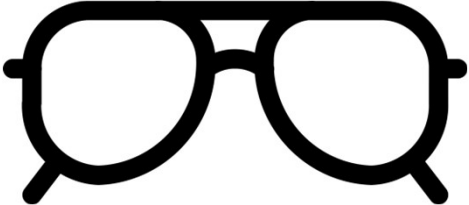

3

# Visibility

Automation = Visibility

**Most financial (and other) data will tell you only what you have done and not where you are going**

## Businesses – “Traditionally” Solving the AR Problem

### Adding fuel to the fire

Outcome is more payments into an already struggling process

- More postings on account
- More time from collections teams applying payments at month end
- More time on rework
- More time chasing customers who have already paid because of a messy sales ledger

**Collections and Risk**

## Businesses – “Traditionally” Solving the AR Problem

### Adding fuel to the fire

Outcome is more payments into an already struggling process

- More postings on account
- More time from collections teams applying payments at month end
- More time on rework
- More time chasing customers who have already paid because of a messy sales ledger

**Collections and Risk**

**Customer Data**

- Operational level metrics only
- Based on how customers 'should pay' rather than 'how they actually pay'
- Relies on CRA/Insurance Data (potentially 3/6 months old)
- Takes time and effort to put data together – not real time

**Like building a new house and starting with the roof: there's no solid foundation to build on**

**What that looks like**

**What that looks like**

### What that looks like

### What that looks like

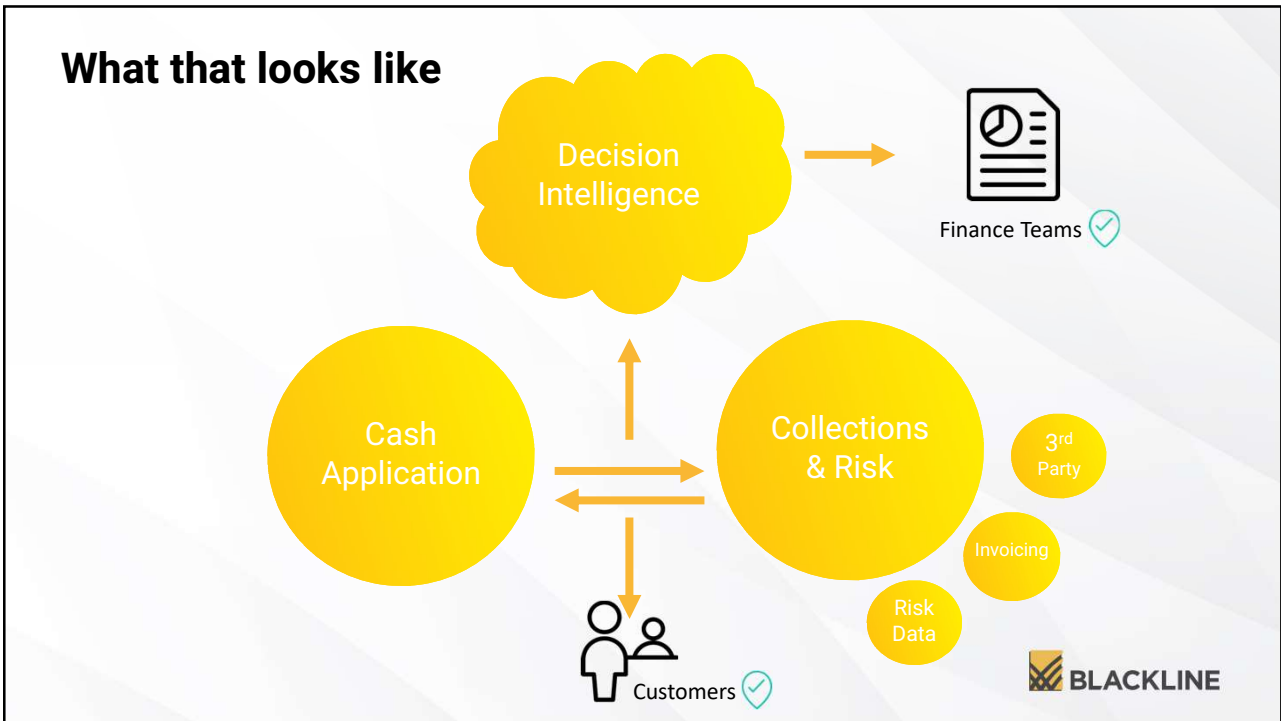

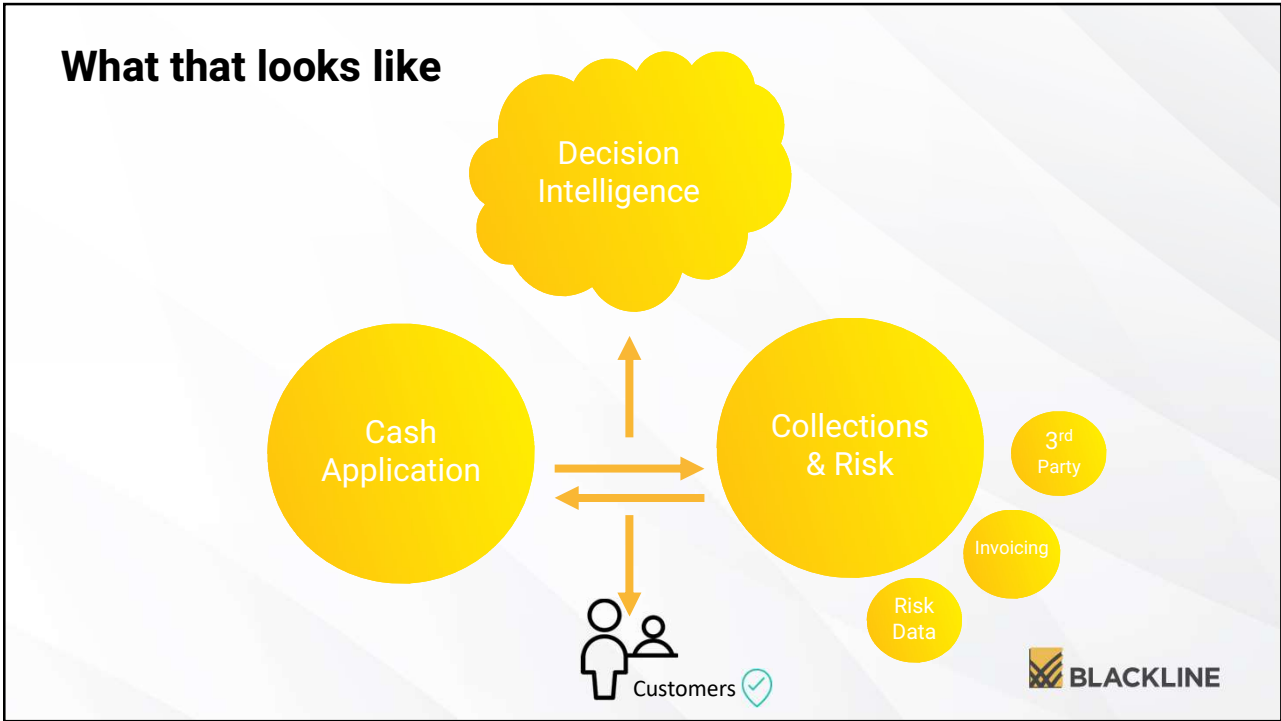

### What that looks like

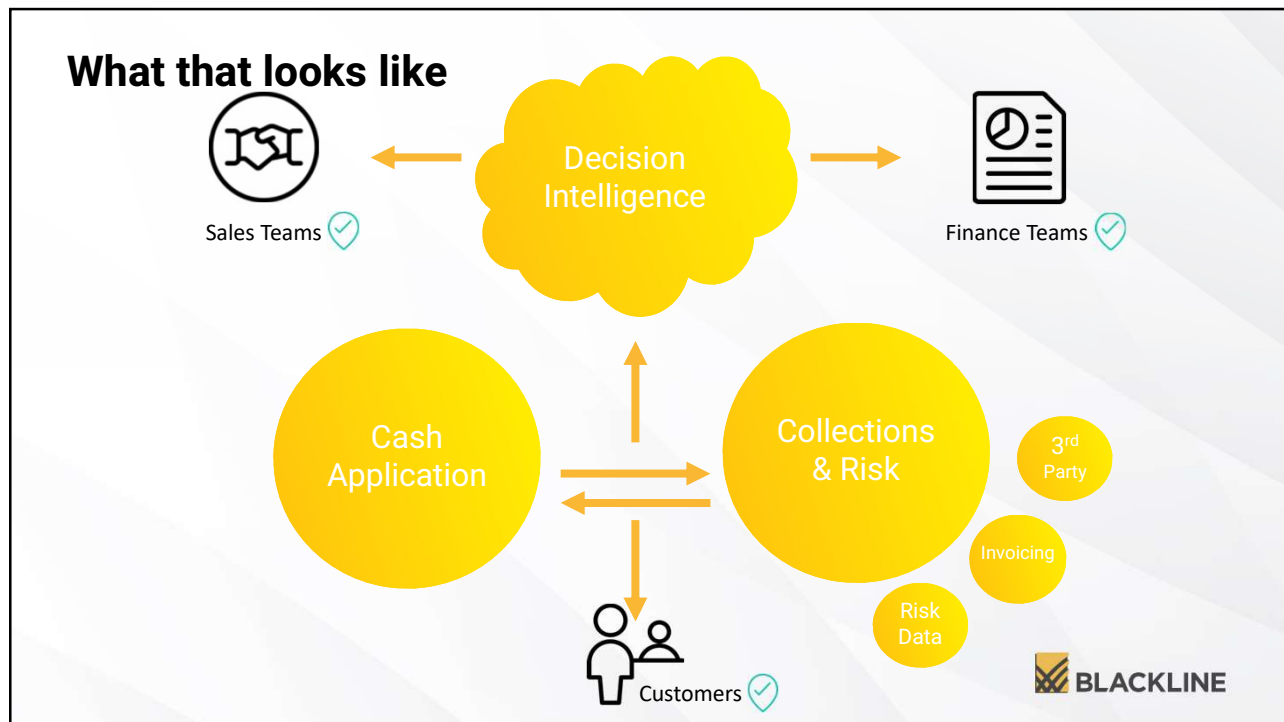

### What that looks like

## What Does Decision Intelligence Look Like?

### Sales Teams

- What makes a good customer? (paying to terms, fewer queries etc)
- Who should we trade more with?
- Who costs the business to trade with?
  - Who consistently pays late and results in you having to borrow money with higher interest rates to operate because they don't pay?
  - Is it actually more cost effective to not do business with them? Or work with account management to change to shorter terms based on their poor paying performance.

### Finance Teams

- What's the real risk to the business?
- Who pays when? How? How much? How often?
- Enable quicker access to cash and ensure financial stability
- Greater detail on payment forecasting allowing better decisioning on the need to borrow

# Take AR Further

Now is the time to move from process to progress

21

## BlackLine Complete Invoice-to-Cash Solution

## Accounts Receivable - Strategic & Operationally Critical

AR is a strategic partner to the **office of the CFO** and enables better, data driven, business outcomes

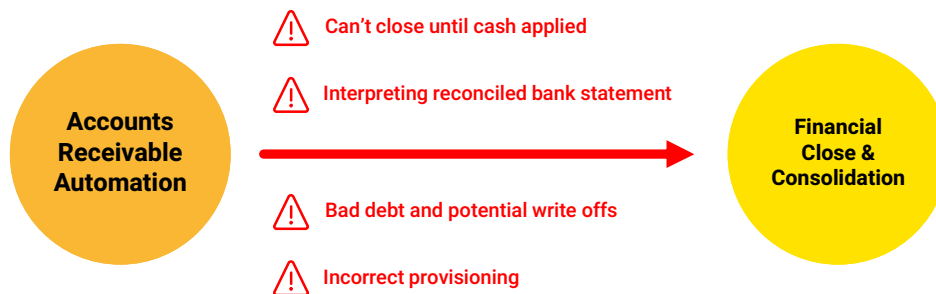

**Accounts Receivable Automation**

- Faster Cashflow
- Greater Assurance
- Lower Risk
  - Happier Customers
  - Increased Profitability

23

## Accounts Receivable - Strategic & Operationally Critical

24

## To summarize....

3 key points to be resilient

### Time

- Where is time consumed?
- What actions are NOT done today that would add value?
- Actions that drive value?

### Data Driven Decisions

- Data drives Decisions
- Decisions drive Actions
- Actions drive Results & Outcomes

### Visibility

- Ability to be flexible
- Plan, Do, Study, Act
- See different 'routes' to achieve goal

25

Automation is to Time  
What interest is too money!
